AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the

application:

**Listing of Claims:** 

1. (Withdrawn) An objective lens for an optical disk, comprising a bi-aspherical single

lens having a numerical aperture of 0.7 or more, wherein a center thickness of the lens is more

than a focal distance.

2. (Withdrawn) The objective lens for the optical disk according to claim 1 wherein an

image forming magnification in a design reference wavelength is 0 times.

3. (Withdrawn) The objective lens for the optical disk according to claim 1 wherein the

design reference wavelength is shorter than 0.45 µm.

4. (Withdrawn) The objective lens for the optical disk according to claim 1 wherein the

focal distance is shorter than 4.0 mm and longer than t represented by the following equation:

t = d/n + 0.9 (mm),

in which d denotes a thickness of the optical disk, and n denotes a refractive index of the

optical disk.

5. (Withdrawn) An objective lens for an optical disk, comprising a single lens having at

least one surface formed in an aspheric shape and having a numerical aperture of 0.7 to 0.8 and

an operation distance of 0.2 mm or more, and satisfying the following condition:

 $0.85 < d_1/f < 1.5$ ;

 $0 > d_1/R2 > -0.7$ ; and

n > 1.6,

in which f denotes a focal distance of the lens, d<sub>1</sub> denotes a center thickness of the lens,

R2 denotes a curvature radius in a vertex of the lens on an optical disk side, and n denotes a

refractive index of the lens.

6. (Withdrawn) The objective lens for the optical disk according to claim 5 wherein the

focal distance is 2.2 mm or less.

7. (Withdrawn) The objective lens for the optical disk according to claim 5 wherein a

thickness of a transmission layer of the optical disk is 0.3 mm or less.

8. (Currently Amended) An objective lens for an optical disk including a

transmission layer having a thickness of 0.3 mm or less, comprising:

a single lens having a first surface on a light source side and a second surface on an

optical disk side and at least one of the first and second surfaces formed in an aspheric shape,

having a numerical aperture of 0.78 or more, converging a blue laser light having a wavelength

less than 650 nm, which is emitted by a light source and enters the first surface, at a focal point

outside the lens, and satisfying the following condition:

 $d_1/f > 1.2$ ;

0.65 < R1/f < 0.95;

|R1/R2| < 0.7; and

n > 1.65,

in which f denotes a focal distance of the lens, d<sub>1</sub> denotes a center thickness of the lens,

R1 denotes a curvature radius in a vertex of the first surface, R2 denotes a curvature radius in a

vertex of the second surface, and n denotes a refractive index of the lens; and

having a working distance of 0.3 mm or more, and having a wavefront aberration of

 $0.04 \lambda$  ( $\lambda$  is a design reference wavelength) or less when the first surface and the second surface

are not co-axial by 5µm.

9. (Canceled)
